

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-17 (Canceled).

Claim 18 (Currently Amended): An apparatus for reproducing information from an information recording medium ~~as defined in claim 17~~, the information recording medium comprising,

a data area configured to store said audio/video data; and

a management area separate from said data area and configured to store said control information,

wherein said control information includes RTR video manager information having a video manager information management table containing character set code information,

said control information includes original PGC information having cell information corresponding to a cell,

said original PGC information includes program information having first primary text information,

said first primary text information has two fields, the first field being used for describing in ASCII character set information and the second field being used for describing in said character set code information,

said cell information includes cell general information and one or more pieces of cell entry point information corresponding to cell entry points of said cell,

said cell general information includes information of a type of said cell, information describing a number of said cell entry point information, information describing a presentation start time of said cell, and information describing a presentation end time of said cell,

one piece of said cell entry point information includes type information of one of said cell entry points and information of a presentation time for one of said cell entry points,

one piece of said cell entry point information is configured to include second primary text information,

said second primary text information has two fields, the first field being used for describing in ASCII character set information and the second field being used for describing in said character set code information,

said control information includes movie AV file information having movie video object information relating to said audio/video data,

said movie video object information includes movie video object general information containing temporary erase information of said audio/video data, and

said audio/video data is configured to be set at a temporarily erased state, said temporarily erased state indicated by said temporary erase information,

said apparatus comprising:

a first reproducer configured to reproduce said control information from the management area; and

a second reproducer configured to reproduce said audio/video data from the data area.

Claim 19 (Previously Presented): A method for recording information on an information recording medium, the information recording medium comprising,

a data area configured to store said audio/video data; and

a management area separate from said data area and configured to store said control information,

wherein said control information includes RTR video manager information having a video manager information management table containing character set code information,

said control information includes original PGC information having cell information corresponding to a cell,

said original PGC information includes program information having first primary text information,

said first primary text information has two fields, the first field being used for describing in ASCII character set information and the second field being used for describing in said character set code information,

said cell information includes cell general information and one or more pieces of cell entry point information corresponding to cell entry points of said cell,

said cell general information includes information of a type of said cell, information describing a number of said cell entry point information, information describing a presentation start time of said cell, and information describing a presentation end time of said cell,

one piece of said cell entry point information includes type information of one of said cell entry points and information of a presentation time for one of said cell entry points,

one piece of said cell entry point information is configured to include second primary text information,

said second primary text information has two fields, the first field being used for describing in ASCII character set information and the second field being used for describing in said character set code information,

said control information includes movie AV file information having movie video object information relating to said audio/video data,

said movie video object information includes movie video object general information containing temporary erase information of said audio/video data, and

said audio/video data is configured to be set at a temporarily erased state, said temporarily erased state indicated by said temporary erase information,

said method comprising:

recording said audio/video data on the data area; and

recording said control information on the management area.

Claim 20 (Previously Presented): A method for reproducing information from an information recording medium, the information recording medium comprising,

a data area configured to store said audio/video data; and

a management area separate from said data area and configured to store said control information,

wherein said control information includes RTR video manager information having a video manager information management table containing character set code information,

said control information includes original PGC information having cell information corresponding to a cell,

said original PGC information includes program information having first primary text information,

said first primary text information has two fields, the first field being used for describing in ASCII character set information and the second field being used for describing in said character set code information,

said cell information includes cell general information and one or more pieces of cell entry point information corresponding to cell entry points of said cell,

said cell general information includes information of a type of said cell, information describing a number of said cell entry point information, information describing a

presentation start time of said cell, and information describing a presentation end time of said cell,

one piece of said cell entry point information includes type information of one of said cell entry points and information of a presentation time for one of said cell entry points,

one piece of said cell entry point information is configured to include second primary text information,

said second primary text information has two fields, the first field being used for describing in ASCII character set information and the second field being used for describing in said character set code information,

said control information includes movie AV file information having movie video object information relating to said audio/video data,

said movie video object information includes movie video object general information containing temporary erase information of said audio/video data, and

said audio/video data is configured to be set at a temporarily erased state, said temporarily erased state indicated by said temporary erase information,

said method comprising:

reproducing said control information from the management area; and

reproducing said audio/video data from the data area.

Claim 21 (Canceled).

Claim 22 (Currently Amended): An apparatus for reproducing information from an information recording medium ~~as defined in claim 21~~, the information recording medium comprising,

a data area configured to store said audio/video data; and

a management area, separate from said data area, configured to store said control information,

wherein said control information includes RTR video manager information having video manager information management table containing character set code information,

wherein said control information includes Original PGC information having cell information corresponded to cell, and

said Original PGC information includes program information having one primary text information, and

said one primary text information has two fields, the first field being used for describing in ASCII character set and the second field being used for describing in said character set code information,

wherein said cell information includes cell general information and one or more pieces of cell entry point information corresponded to cell entry points of said cell, and

said cell general information includes information of a type of said cell, information describing a number of said cell entry point information, information describing a presentation start time of said cell, and information describing a presentation end time of said cell, and

one piece of said cell entry point information includes type information of one of said cell entry points and information of a presentation time for said one of cell entry points,

wherein one piece of said cell entry point information is configured to include the other primary text information, and

said the other primary text information has two fields, the first field being used for describing in ASCII character set and the second field being used for describing in said character set code information,

wherein said control information includes movie AV file information having movie video object information relating to said audio/video data, and

said movie video object information includes movie video object general information containing temporary erase information of said audio/video data, and

wherein said audio/video data is configured to be set at a temporarily erased state, said temporarily erased state being indicated by said temporary erase information,

said apparatus comprising:

a first reproducer configured to reproduce said control information from the management area; and

a second reproducer configured to reproduce said audio/video data from the data area.

Claim 23 (Currently Amended): A method for recording information on an information recording medium, the information recording medium comprising,

a data area configured to store said audio/video data; and

a management area, separate from said data area, configured to store said control information,

wherein said control information includes RTR video manager information having video manager information management table containing character set code information,

wherein said control information includes Original PGC information having cell information corresponded to cell, and

said Original PGC information includes program information having one primary text information, and

said one primary text information has two fields, the first field being used for describing in ASCII character set and the second field being used for describing in said character set code information,

wherein said cell information includes cell general information and one or more pieces of cell entry point information corresponded to cell entry points of said cell, and

said cell general information includes information of a type of said cell, information describing a number of said cell entry point information, information describing a presentation start time of said cell, and information describing a presentation end time of said cell, and

one piece of said cell entry point information includes type information of one of said cell entry points and information of a presentation time for said one of cell entry points,

wherein one piece of said cell entry point information is configured to include the other primary text information, and

said the other primary text information has two fields, the first field being used for describing in ASCII character set and the second field being used for describing in said character set code information,

wherein said control information includes movie AV file information having movie video object information relating to said audio/video data, and

said movie video object information includes movie video object general information containing temporary erase information of said audio/video data, and

wherein said audio/video data is configured to be set at a temporarily erased state, said temporarily erased state being indicated by said temporary erase information,

said method comprising:

reproducing said control information from the management area; and

reproducing said audio/video data from the data area.

Claim 24 (Currently Amended): A method for reproducing information from an information recording medium, the information recording medium comprising,

a data area configured to store said audio/video data; and

a management area, separate from said data area, configured to store said control information,

wherein said control information includes RTR video manager information having video manager information management table containing character set code information,

wherein said control information includes Original PGC information having cell information corresponded to cell, and

said Original PGC information includes program information having one primary text information, and

said one primary text information has two fields, the first field being used for describing in ASCII character set and the second field being used for describing in said character set code information,

wherein said cell information includes cell general information and one or more pieces of cell entry point information corresponded to cell entry points of said cell, and

said cell general information includes information of a type of said cell, information describing a number of said cell entry point information, information describing a presentation start time of said cell, and information describing a presentation end time of said cell, and

one piece of said cell entry point information includes type information of one of said cell entry points and information of a presentation time for said one of cell entry points,

wherein one piece of said cell entry point information is configured to include the other primary text information, and

said the other primary text information has two fields, the first field being used for describing in ASCII character set and the second field being used for describing in said character set code information,

wherein said control information includes movie AV file information having movie video object information relating to said audio/video data, and

said movie video object information includes movie video object general information containing temporary erase information of said audio/video data, and

wherein said audio/video data is configured to be set at a temporarily erased state, said temporarily erased state being indicated by said temporary erase information,

said method comprising:

reproducing said control information from the management area; and

reproducing said audio/video data from the data area.
